DETAILED ACTION

Response to Amendment

The amendment filed on 04/05/2007 was entered.

Information Disclosure Statement

Receipt of the Information Disclosure Statement (IDS) with copies of the reference cited therein, was received on 04/05/2007. An initialized copy of the IDS is enclosed with this office action.

Allowable Subject Matter

Claims 1-36 are allowed.

The following is an examiner's statement of reasons for allowance: the claim address a method and an apparatus for producing three-dimensional information of an object in medical X-ray imaging, characterized in that the object is modeled mathematically independently of X-ray imaging, the object is X-radiated from at least two different directions and the said X-radiation is detected to form projection data of the object, said projection data and said mathematical modeling of the object are utilized in Bayesian inversion based on Bayes' formula.

Regarding independent claim 1, the examiner found no reference in prior art that disclose a method for producing three-dimensional information of an object comprising: said projection data and said mathematical modeling of the object are utilized in Bayesian inversion based on Bayes' formula, when taken in combination with the other limitations of the claim.

Dependent claims 2-18 are allowed by virtue of their dependency.

Regarding independent claim 19, the examiner found no reference in prior art that disclose an apparatus for producing three-dimensional information of an object comprising: means for utilizing said projection data and said mathematical modeling of the object in Bayesian inversion based on Bayes' formula, when taken in combination with the other limitations of the claim.

Dependent claims 20-36 are allowed by virtue of their dependency.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

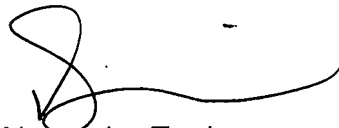

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Morris et al. (NPL) show a Bayesian approach to high resolution 3D surface reconstruction from multiple images and Reader et al. (NPL) show fast accurate iterative three-dimensional Bayesian reconstruction for low-statistics positron volume imaging.
